What is Blockchain ?

Blockchain is a system of recording information in a way that makes it difficult or impossible to change, hack, or cheat the system.

Blockchain is a type of DLT in which transactions are recorded with an immutable cryptographic signature called a hash.

The Properties of Distributed Ledger Technology(DLT)

Programmable	Immutable	Distributed
Secure	Time-Stamped	Design
Anonymous	Unanimous	Project

A blockchain is essentially a digital ledger of transactions that is duplicated and distributed across the entire network of computer systems on the blockchain. Each block in the chain contains a number of transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger. The decentralised database managed by multiple participants is known as Distributed Ledger Technology

- 1 A blockchain is a database that stores encrypted blocks of data then chains them together to form a chronological single-source-of-truth for the data
- 2 Digital assets are distributed instead of copied or transferred, creating an immutable record of an asset
- 3 A transparent ledger of changes preserves integrity of the document, which creates trust in the asset.

ABOUT US

Welcome to 100% Transparent and 100% Decentralized Opportunity E-Crypto Trades is the Digital Platform which Provide you a superb opportunity for your bright future with The guidance of desiccated team and committed Professional having best experience in crypto currency and Network marketings.

- 1 No hassle of depending on third-party as we use Decentralized TRC-20 Blockchain transaction Technology.
- 2 Wants to serve people with its fast and Secure platform.
- 3 Send instant payments and get confirmation within a blink of your eyes.

All About Cryptocurrency

EVOLUTION OF CRYPTO CURRENCY

Bitcoin? Ethereum? USDT ? A global virtual currency designed to work as a medium of exchange ? 20 years ago, this was unheard of and deemed almost impossible, and yet as of today 3 in 4 people use cryptocurrency, and around 2.9 to 5.8 million Americans alone have invested, with hopes of making them better off financially in the future.

Cryptocurrencies first emerged in 2009 when the world's first Decentralized currency, Bitcoin was created. The core idea behind cryptocurrency was to create a secure and anonymous way to transfer currency from one person to another, and since then its value has skyrocketed and it's been heralded as 'Digital Gold' amongst its users.

Crypto Currency

Cryptocurrency is a digital payment system that doesn't rely on banks to verify transactions. It's a peer-to-peer system that can enable anyone anywhere to send and receive payments. Instead of being physical money carried around and exchanged in the real world, cryptocurrency payments exist purely as digital entries to an online database describing specific transactions. When you transfer cryptocurrency funds, the transactions are recorded in a public ledger. Cryptocurrency is stored in digital wallets. Cryptocurrency received its name because it uses encryption to verify transactions. This means advanced coding is involved in storing and transmitting cryptocurrency data between wallets and to public ledgers. The aim of encryption is to provide security and safety. The first cryptocurrency was Bitcoin, which was founded in 2009 and remains the best known today. Much of the interest in cryptocurrencies is to trade for profit, with speculators at times driving prices skyward.
